

Help us understand how HIV stigma affects gay and bisexual males living with HIV !

The purpose of this research project is to examine the role of thinking patterns about HIV stigma (e.g., feeling judged, isolated, segregated, or burdened), and to examine any experiences of distressing feelings, thoughts and behaviours among gay/bisexual males (and other men who have sex with men) living with HIV. You are invited to participate to help increase understanding of the effects of HIV stigma on health in the hope of preventing HIV stigma and better managing associated difficulties. To complete the anonymous, online survey and be entered into a draw to win one of two \$100 iTunes vouchers go to:
